Capitalizing On Customer Service
Farm Chemicals, p12
June, 1993
Language: English   Record Type: Abstract
Document Type: Magazine/Journal; Trade

ABSTRACT:
Duesterhaus Fertilizer (Quincy, IL) **pays** close attention to the demands
of farmers in the area, and offers a diverse array of customer services
along with chemicals and fertilizer. Duesterhaus can answer farmers'
questions on past application history, field maps or even retirement
planning. Deuesterhaus serves some 1,000 corn, soybean, wheat and milo
farmers, and even some cotton or specialty crop growers from the mid-South.
Services offered include soil testing, field **maps** , **application**
recommendations, yield data, and record-keeping to satisfy EPA
requirements. Services outside Duesterhaus' normal expertise are answered
by experts called in from other firms. The firm continues to seek ways to
strengthen customer ties. Retail herbicide, insecticide and fertilizer
sales still make up 95% of the firm's business, with sales of some 20,000
tpy of dry and liquid fertilizers.

TEXT:
        Auction site lets farmers buy and sell **agricultural** supplies online
        With the debut of Farmbid.com, an online auction site, farmers have a new source for buying and selling **agricultural** equipment, supplies, and merchandise. Auction categories include tractors, parts, tools, technology, livestock, crops and forage, produce, country store, and supplies.
        Listings are free for the first 120 days. There is a fee to place an item as a featured auction or to place listings in bold print. Farmbid.com takes a sales commission on every item sold.
        To visit the auction site, go to www.farmbid.com.
        Do your browsing and comparison shopping with this new Web site
        The newly launched Internet site, DirectAg.com, lets producers compare, purchase, and finance name brand products and services online. When it's at full capacity, it will offer numerous ag-related products ranging from animal health to ag chemicals to insurance to farm credit.
        Producers using DirectAg.com will receive competitive prices and volume discounts, just as they would when ordering in bulk from local dealers.
        For more information, visit this new site at www.directag.com, or call 877/651 - 1770.
        This new Microsoft mouse has no moving parts and can work anywhere
        The lntelliMouse Explorer from Microsoft is a new breed of computer mouse. It features the lntelliEye optical tracking technology that uses an optical sensor instead of moving parts. It works on virtually any surface, eliminating the need for a mouse pad.
        The IntelliMouse costs $75. For more information, visit www. microsoft.corn/hardware, or call 800/426-9400.
        All over the country, SST Information Labs help farmers manage data
        Do you sometimes wish there were two of you? Jim Borowski, an agronomist for Walther Farms in Clio, Michigan, knows the feeling.
        The main crop on the farm is potatoes for the chip market, They raise 6,500 acres of potatoes, 2,200 acres of corn, and a few hundred acres of soybeans. Borowski is in charge of precision **agriculture** on the farm.
        Share the load.
        Walther Farms does grid soil sampling and variable-rate application of lime and potash. They also use yield monitors on their potato harvesters and on their combine. Borowski makes all of the yield maps.
        For some other things, he uses the SST Information Lab in Saginaw, Michigan. SST Development Group, Inc., currently has 10 information labs throughout the country.
        The labs provide crop consultants, farm input suppliers, and producers with widespread access to precision farming technology. Each lab is owned by SST Information Lab partners, such as farm input supply organizations and crop consulting firms already in the community.
        The power of pooling
        Ryan Valik at the Saginaw, Michigan, lab makes all of Borowski's variable-rate **application** **maps** . Then UAP, a local ag input supplier,

applies the fertilizer. Borowski also uses the information lab for record keeping and field analysis.

Through the lab, Valik is able to provide information to Borowksi and his other customers. For instance, he can tell them how certain hybrids fared in various soil types in the region.

"He has that information from across the county or from a certain area, and that's pretty valuable to a producer," says Borowski.

All the pooled data is stored anonymously with the permission of the producers. Only participating producers can benefit from information derived from the regional data.

The users' corner

What do you do if you are planning to travel with your laptop and you want to check your e-mail? This question came up in the @g Computing talk group, Visitors to the group offer some advice,

Some users say to call your internet Service Provider (ISP) and ask for the toll-free number they offer for connecting from remote locations, There may be a small fee of 5 (cents) to 10 (cents) per minute.

"A money-saving hint: Put your mail setup in text mode. It's much faster than html e-mails," says one visitor to the site.

Other e-mail users suggested using Web-based e-mail accounts. That way, you can access your mailbox from any computer that has internet access.

"The problem with Web-mail is that you have to find someone with Internet access or find and **pay** more for a motel room with access. With your ISP toll-free number, you can connect from any phone line," says one e-mail user.

**ROMLDR, an embedded system program locator. (modifying a program from
  MS-DOS EXE format to a located binary file format) (includes related
  articles on coding for embedded applications and startup code for
  embedded systems) (Tutorial)**
Allison, Charles B.
C Users Journal, v12, n3, p35(10)
March, 1994
DOCUMENT TYPE: Tutorial   ISSN: 0898-9788   LANGUAGE: ENGLISH
RECORD TYPE: FULLTEXT; ABSTRACT
WORD COUNT: 4988   LINE COUNT: 00442

ABSTRACT: ROMLDR allows programmers to modify a program from the MS-DOS
EXE format to a located binary file format. Its primary purpose is to
modify DOS-based C compiler output for use in EPROM-based embedded systems.
The major elements of the location process are presented, including the
structure of a DOS EXE file and how the structure is reflected in ROMLDR's
code. EXE files consist of headers, program code, optional program debug
information and data initialization values. ROMLDR utilizes the linked EXE
file and its MAP file to create a binary file that can be programmed into
EPROMs. The program reads and processes lines from the MAP file by
executing a while loop. Once it has acquired the MAP file, it reads the EXE
header section via the function gethdr, sorts the fix-up pointers and
performs fix ups on each EPROM and RAM segment. ROMLDR can be useful for
low-end applications where there is one EPROM and one RAM memory space.

ABSTRACT: Top executives from 11 major vendors of control software discuss
issues affecting both the software publishers and users in this second of
two parts on the Software for Control Roundtable. Issues covered in this
part are features and other factors that users should consider in selecting
a control software package and vendor. These factors and issues include:
ensuring that the package will do the job the buyer wants, availability of

an evaluation period, the choice between packages with or lacking network integration potential, the usefulness of rapid prototyping capabilities, user friendliness, evaluation of potential suppliers, and pricing and what the price includes. The growing competition in the control software marketplace is also discussed.

MAP-TOP, COS set '88 date for key MAP   demo . (Corporation for Open Systems)
Bruno, Charlie
Computer Systems News, n296, p1(2)
Jan 12, 1987
ISSN: 0164-9981   LANGUAGE: ENGLISH   RECORD TYPE: ABSTRACT

ABSTRACT: The Corporation for Open Systems (COS) and the MAP-TOP Users Group will cooperate to stage a demonstration of MAP 3.0 communications specifications. The demonstration will be held in Baltimore, Maryland, in June 1988. The event had been planned for Autofact '87 in November 1987 but was delayed because COS was late with required procedures. The lack of commitment by major vendors contributed to the delay. Several vendors, including Hewlett-Packard Co. and Digital Equipment Corp., now say they will participate; IBM is still undecided. Seven test sites have been selected, with MAP 3.0 products to be shop-floor tested at each site.

ABSTRACT: A spokesman for CIMAP, the 8 million pounds sterling demonstration of Manufacturing Automation Protocol (MAP), said that people should not lose sight of the real message, which is how the U.K. will benefit from multivendor data manipulation. MAP should not be looked on as a cure-all for the U.K.'s economic problems, nor is it something people should forget about after the one-day event. The exhibition, the largest MAP demonstration ever, will involve over 60 companies and will include the first demonstration of the Technical and Office Protocol.

Test snags delay key MAP   demo . (Manufacturing Automation Protocol)
Keller, Erik L.
Computer Systems News, n290, p1(2)
Nov 24, 1986
ISSN: 0164-9981   LANGUAGE: ENGLISH   RECORD TYPE: ABSTRACT

ABSTRACT: The scheduled Autofact '87 MAP-TOP (Manufacturing Automation Protocol-Technical Office Protocol) networking demonstration has been postponed until the second quarter of 1988. Hardware vendors comprising the Corporation for Open Systems (COS) said they were unable to develop testing procedures for version 3.0 of the MAP-TOP standards for factory and office automation and would not have working products ready for testing by the 1987 deadline. The demonstration proposal originally had 50 vendors

scheduled to display actual connectivity products that would link
multivendor hardware and applications software across multiple networks.
Major vendors such as Hewlett-Packard said the delay was beneficial, since
the company did not expect to be able to develop a fully operational
product by the Autofact conference scheduled for November 1987, although
the initial draft of specification 3.0 of MAP is still expected to be ready
by early April 1987.

Nov. 11, 1985
ISSN: 0164-9981   LANGUAGE: ENGLISH   RECORD TYPE: ABSTRACT

ABSTRACT: Hardware, software and communications problems marred the
Manufacturing Automation Protocol-Technical Office Protocol multivendor
networking demonstration at this year's Autofact '85 show. Sponsored by GM
and Boeing Computer Services, the file transfer applications were
successful in demonstrating the potential to read, write, fetch, and delete
files from other systems on the network. Small users said the systems were
still too expensive with current per-node costs being estimated at between
$3000 and $5000. Another demonstration is scheduled in early 1987 or late
1986 and will probably use the MAP 2.1 specification, and carrier-band
network.
